What is the BCBSAZ Health Choice Formulary/Preferred Drug List (PDL)?

A Formulary / Preferred Drug List (PDL) is a list of drugs chosen by BCBSAZ Health Choice and a team of doctors and pharmacists. BCBSAZ Health Choice will cover the drugs listed in our PDL as long as they are medically necessary and appropriate. All Health Choice member prescriptions must be filled at a BCBSAZ Health Choice network pharmacy, and other plan rules must be followed.

The BCBSAZ Health Choice formulary contains drugs used to treat physical conditions and behavioral health conditions.

What if a drug is not on the Formulary/ PDL?

If a drug you want to prescribe for your patient is not on this Formulary / PDL, the prescriber can:

- Prescribe a similar drug that is Formulary / PDL covered, or
- Ask BCBSAZ Health Choice to make an exception and cover the medically necessary, non-formulary drug through the prior authorization process.

Can the Formulary / PDF change?

Yes, BCBSAZ Health Choice may add or take off drugs during the year. To get the latest information about covered drugs, go to our website at <https://www.healthchoiceaz.com/> or call BCBSAZ Health Choice Member Services at 480-968-6866 or 1-800-322-8670 (outside Maricopa County).

Product Selection Criteria

The BCBSAZ Health Choice Pharmacy & Therapeutics Committee will consider and advise BCBSAZ Health Choice on all new-to-market drugs and will continually review and evaluate existing market drugs for formulary/PDL inclusion. The committee's evaluation includes a current literature review. Expert external opinion may also be sought. Formal reviews are prepared that typically address the following information:

- Safety & Efficacy
- Comparison studies
- Approved indications
- Adverse effects
- Contraindications, warnings and precautions
- Pharmacokinetics
- Cost-effectiveness
- Patient administration and compliance considerations

The Pharmacy & Therapeutics Committee reviews all AHCCCS drug coverage requirements as noted on the AHCCCS PDL lists and honors all requirements for preferred drug coverage.

When a new drug is considered for formulary inclusion, an attempt will be made to examine the drug relative to similar drugs currently on formulary. In addition, entire therapeutic classes are periodically reviewed. The class review process may result in deletion of one or more drugs in a particular therapeutic class in an effort to continually promote the most clinically useful and cost effective agents. Drug coverage within therapy classes is consistent with AHCCCS requirements for drug coverage.

The entire formulary / PDL is reviewed and approved annually.

Prior authorization (PA) is required for two groups of medications and for two clinical formulary/ PDL override conditions:

1. Medication Groups

- Medications noted with a PA in the formulary / PDL. BCBSAZ Health Choice may require prior authorization for certain drugs on the Preferred Drug List. This means that your doctor will need to get approval from us before you can fill some of your prescriptions. If approval isn't given, BCBSAZ Health Choice will not cover the drug.
- All unlisted medications.

2. Clinical Override Conditions

- To override a Step Therapy (ST) edit. In some cases, BCBSAZ Health Choice requires you to try certain drugs first to treat your medical condition before we will cover another drug for that same condition. For example, if Drug A and Drug B both treat your medical condition, BCBSAZ Health Choice may not cover Drug B unless you try Drug A first. If Drug A does not work for you, we will then cover Drug B.
- To override a Quantity Limit (QL) edit. For certain drugs, BCBSAZ Health Choice limits the amount of the drug it will cover. For example, we provide 30 pills in 30 days per prescription for mirtazapine.

BCBSAZ Health Choice anticipates that requests for an unlisted medication will be infrequent and providers will be able to prescribe a formulary / PDL medication for the vast majority of therapeutic needs. Providers are encouraged to use this formulary / PDL when prescribing medications for BCBSAZ Health Choice members to avoid unnecessary delays in therapy.

The AHCCCS Minimum Required Prescription Drug List is included in the BCBSAZ Health Choice Formulary. All AHCCCS Preferred drug are included in our formulary exactly as noted by AHCCCS.

Off label drugs may be prior authorized when the use of the drug has proven to be the community standard.

BCBSAZ Health Choice uses a four (4) day override process to ensure that members can access immediately needed, non-formulary or prior authorization required drugs. The BCBSAZ Health Choice network pharmacy can override the prior authorization requirement to provide the member with the immediately needed drug, such as an antibiotic or other emergent drug by calling us.

BCBSAZ Health Choice providers may formally request the BCBSAZ Health Choice Pharmacy & Therapeutics Committee consider a medication be considered for addition to the formulary / PDL. The instructions and required submission form(s) which indicate how to submit a formulary / PDL medication consideration request are detailed in the BCBSAZ Health Choice Provider Manual. The instructions and materials are also available on the BCBSAZ Health Choice website.

All the information in the BCBSAZ Health Choice formulary is provided as a reference for drug therapy selection. Specific drug selection for an individual patient rests solely with the prescriber.

Formulary Product Descriptions

To assist in understanding which specific strengths and dosage forms are on the formulary, examples are noted below. The general principles shown in the examples can then usually be extended to other entries in the book. Any exceptions are noted in the drug list. There may also be a statement associated with a drug list that gives additional information about which specific products or dosage forms are on formulary.

Generic drugs are identified in lower case type, whereas brand drugs are identified in all caps

allopurinol is a generic drug

ULORIC is a brand drug

The brand name products shown are for reference only; a different brand or a generic version may be dispensed.

simvastatin

ZOCOR

Extended-release and delayed-release products require their own entry. Identified below, both propranolol and propranolol SR are on the formulary.

propranolol

INDERAL

propranolol SR

INDERAL LA

Dose forms on formulary will be consistent with the category and use where listed. Identified below from Otic group, the otic solution and ophthalmic ointment are on the formulary, and the ophthalmic products and topical cream cannot be assumed to be on formulary unless there are entries for these products in the OPTHALMIC and DERMATOLOGY sections of the formulary.

neomycin/polymyxin B/hydrocortisone

CORTISPORIN

Generic Substitution

AHCCCS health plans are required to utilize a mandatory generic drug substitution policy. Generic substitution is a pharmacy action whereby a generic version is dispensed rather than a prescribed brand name product. An important consideration for generic substitution is the knowledge that all approvals of generic drugs by the FDA since 1984, and many generic approvals prior to 1984, have a showing of bioequivalence between the generic versions and the reference brand name product.

To gain FDA approval:

1. The generic drug must contain the same active ingredient(s), be the same strength and the same dosage form as the brand name product.

2. The FDA has given the generic an "A" rating compared to the brand name product indicating bioequivalence, and has determined the generic is therapeutically equivalent to the reference brand name product. The ratings of generic drugs are available by referring to the FDA reference, *Approved Drug Products with Therapeutic Equivalence Evaluations* (Orange Book).

When the above two criteria are met, a generic can be substituted with the full expectation that the substituted product will produce the same clinical effect and safety profile as the prescribed product. Drug products that have a narrow therapeutic index (NTI) can also be guided by these principles. It is not necessary for the healthcare practitioner to approach any one therapeutic class of drug products (e.g., NTI drugs) differently from any other class, when there has been a determination of therapeutic equivalence by the FDA for the drug products under consideration. Also, additional clinical tests or examinations by the practitioner are not needed when a therapeutically equivalent generic drug product is substituted for the brand name product.

It is recommended that generic substitution not be exercised by the pharmacist with multisource products that appear in the Orange Book and carry a "B" rating, indicating that these products cannot be considered therapeutically equivalent to other products in the group. It is also recommended that generic substitution not be undertaken for any unrated multisource products that might be considered narrow therapeutic index, or maintenance drugs where it is known that unrated products from different labelers are not bioequivalent. State law or regulations may dictate the ability to practice generic substitution for selected products or categories of drugs.

Plan Exclusions

The following drug categories are excluded from coverage under the outpatient pharmacy benefit and are not part of the formulary/PDL

- Anti-obesity agents
- Experimental / research drugs
- Cosmetic drugs
- Cosmetic drugs for hair growth
- Nutritional / diet supplements
- Blood and blood plasma products
- Products to promote fertility
- Erectile dysfunction drugs
- Drugs from manufacturers that do not participate in the FFS Medicaid Drug Rebate Program
- Diagnostic products
- Medical supplies except:
 - Syringes
 - Needles
 - Lancets
 - Alcohol Swabs
 - Spacers
 - Blood glucose meters and test strips
- Intrauterine Devices
