HEALTH CHOICE ARIZONA 2021 DENTAL BENEFITS

FOR MEMBERS UNDER 21

AHCCCS covers clinical oral examinations and radiographs for EPSDT members ages birth through 20 years of age.
The following criteria is based on Health Choice Arizona's interpretation of the clinical oral examinations and radiographs when it considers the clinical oral examination medically/ dentally necessary. Clinical oral examinations and radiographs do not require authorization.
Reimbursement for radiographs includes exposure of radiograph, developing, mounting and radiographic interpretation. The appropriate number of radiographs needed for proper diagnosis and the evaluation of the overall dental condition must accompany all requests for prior authorization.

Claim payment decisions for the number of individual periapical radiographs and/or other radiographs will be made based on the individual patient needs and dental age. Radiographs taken should not exceed the ADA's and FDA's Acceptable Radiographic Examination Guidelines which include but are not limited to:

a. Child – Primary Dentition: Posterior bitewings and/or upper/lower occlusal films
b. Child – Transitional dentition: Posterior bitewings, appropriate periapical, and occlusal radiographs as needed based on a patient's individual requirement.
c. Adolescent (ages 16 – 20) – Permanent dentition prior to eruption of third molars: Full mouth periapical series with posterior bitewings or panoramic x-ray with posterior bitewings.
d. For Adult (21 and over) emergency dental benefits please refer to the Dental Matrix for members over 21.

When the cost of individual periapical x-rays and/or bitewings performed on the same date of service exceed the cost of the intraoral complete series, reimbursement will be limited to the cost of the intraoral complete series.

A panoramic radiograph submitted with bitewing radiographs and/or single periapical films are reimbursed at the FMX rate. A panoramic radiograph is not reimbursable within 12 months of bitewing radiographs when taken by the same provider or group.

Radiographs requested for orthodontic treatment are not covered unless orthodontic treatment has been approved by HCA for medical necessity. Radiographs will automatically be included in an approved authorization for orthodontic treatment.

All radiographs must be of good diagnostic quality, properly mounted, dated, positionally oriented, and identified with the member's name and AHCCCS ID. Reduced size radiographs (panoramic, bitewings, periapical x-rays) are not acceptable. HCA will not pay for non-diagnostic x-rays. The cost of all materials and equipment used shall be included in the fee for the radiograph. Radiographs should only be taken when there is an expectation that the diagnostic yield will affect care.
Post-op radiographs are not necessary for the following:

a. Routine extraction
b. Pulpotomy/ pulpectomy
c. Stainless steel crown
d. Space maintainer cementation, except for distal shoe space maintainer.

Diagnostic and preventive services are subject to retro review.

DIAGNOSTIC						
CODE	**DESCRIPTION**	**AGE LIMITATION**	**TEETH COVERED**	**AUTHORIZATION REQUIRED**	**BENEFIT LIMITATIONS**	**DOCUMENTATION REQUIRED**
D0120	Periodic oral evaluation - established patient	0-20		No	One of (D0120, D0145, D0150, D0180) per 6 Month(s) Per Provider OR Group.	
D0140	Limited oral evaluation-problem focused (Emergency Dental Services only)	0-20		No	Not reimbursable on the same day as D0120, D0145, D0150, D0160, or D0170, D9110, D9310, D9430	
D0145	Oral evaluation for a patient under three years of age and counseling with primary caregiver	0-2		No	One (D0120, D0145, D0150, D0180) per 6 Month(s) Per Provider OR Location. Not allowed with non-emergency definitive treatment.	
D0150	Comprehensive oral evaluation - new or established patient	0-20		No	Limited to one D0150 per Dentist or Group per lifetime. Not payable on same DOS as D0120, D0145 or D0160	
D0160	Detailed and extensive oral eval-problem focused, by report	0-20		No	Not allowed on the same DOS as D0120, D0145, D0150, or D0180.	
D0171	Re-evaluation postoperative office visit	0-20		No		
D0180	Comprehensive periodontal evaluation - new or established patient	0-20		No	One of (D0120, D0145, D0150, D0180) per 6 Month(s) Per Provider OR Group.	
D0190	Screening of a patient			No		
D0191	Assessment of a patient			No		
D0210	Intraoral - complete series of radiographic images (including bitewings)	6-20		No	Once every 36 Months. Not payable within 12 months of (D0272, D0274, D0277) or within 36 months of (D0330) Minimum of 14 films that consists of a minimum of 2 bitewing x-rays	
D0220	Intraoral - periapical first radiographic image	0-20		No	One of (D0220) per 1 Day Per Provider OR Group.	
D0230	Intraoral - periapical each additional radiographic image	0-20		No	Two of (D0230) per 1 Day Per patient OR Group. Additional Films Require Documentation to establish medical necessity	
D0240	Intraoral - occlusal radiographic image	0-20		No	Limited to two films per DOS in a 12 month period	

D0250	Extra-oral – 2D projection radiographic image created using a stationary radiation source, and detector	0-20		No		
D0251	Extra-oral posterior dental radiographic image		Not a covered benefit			
D0270	Bitewing - single radiographic image	2-20		No	One of (D0270) per 6 Month(s) Per patient. NOT PAYABLE WITHIN 12 MONTHS OF D0210, D0277, OR D0330	
D0272	Bitewings - two radiographic images	2-20		No	One of (D0272, D0273, D0274) per 6 Month(s) Per patient. NOT PAYABLE WITHIN 12 MONTHS OF D0210, D0277, OR D0330	

DIAGNOSTIC						
CODE	**DESCRIPTION**	**AGE LIMITATION**	**TEETH COVERED**	**AUTHORIZATION REQUIRED**	**BENEFIT LIMITATIONS**	**DOCUMENTATION REQUIRED**
D0273	Bitewings - three radiographic images	10-20		No	One of (D0272, D0273, D0274) per 6 Month(s) Per patient. NOT PAYABLE WITHIN 12 MONTHS OF D0210, D0277, OR D0330	
D0274	Bitewings - four radiographic images	10-20		No	One of (D0272, D0273, D0274) per 6 Month(s) Per patient. NOT PAYABLE WITHIN 12 MONTHS OF D0210, D0277, OR D0330	
D0277	Vertical bitewings - 7 to 8 films	0-20		No	One of (D0210, D0277, D0330) per 36 Month(s) Per patient.	
D0290	Posterior-anterior or lateral skull and facial bone survey radiographic image	0-20		Not covered by AHCCCS		
D0310	Sialography	0-20		No		
D0320	Temporomandibular joint arthogram, including injection	0-20		No		
D0321	Other temporomandibular joint films, by report	0-20		No		

D0330	Panoramic radiographic image	6-20		No **Yes when member is under 6 years of age**	One of (D0330) per 36 months Three of (D0330) per lifetime. Not payable within 12 months of (D0270-D0274) when billed by the same provider or group. Reimbursement for panorex taken by oral surgeon to evaluate third molars, oral pathology, jaw fractures subject to retro review	When member is under 6 years of age Treatment notes required; narrative of medical necessity
D0340	Cephalometric radiographic image	0-20		No		
D0350	2D oral/facial photographic image obtained intra-orally or extra-orally	0-20		No		
D0393	Treatment simulation using 3D image volume	0-20		No		
D0470	Diagnostic casts	0-20		No		
D0502	Other oral pathology procedures, by report	0-20		No		
D0604	Antigen testing for a public health related pathogen, including coronavirus	0-20		BR		
D0605	Antibody testing for a public health related pathogen, including coronavirus	0-20		BR		
D0701	Panoramic radiographic image- capture only	0-20		No **Yes, when member is under 6 years of age** **Effective date 3/1/2021**	Must be billed with one of the teledentistry codes (D9995 or D9996)	When member is under 6 years of age Treatment notes required; narrative of medical necessity
D0702	2-D cephalometric radiographic image- image capture only	0-20		**Yes** **Effective date 3/1/2021**	Must be billed with one of the teledentistry codes (D9995 or D9996)	Treatment notes required; narrative of medical necessity
D0703	2-D oral/facial photographic image obtained intra-orally or extra-orally-image capture only	0-20		**Yes** **Effective date 3/1/2021**	Must be billed with one of the teledentistry codes (D9995 or D9996)	Treatment notes required; narrative of medical necessity
D0705	Extra oral posterior dental radiographic image- image capture only.	0-20		No	Must be billed with one of the teledentistry codes (D9995 or D9996)	

DIAGNOSTIC						
CODE	DESCRIPTION	AGE LIMITATION	TEETH COVERED	AUTHORIZION REQUIRED	BENEFIT LIMITATIONS	DOCUMENTATION REQUIRED
D0706	Intraoral-occlusal radiographic image-image capture only	0-20		No	Must be billed with one of the teledentistry codes (D9995 or D9996)	
D0707	Intraoral-periapical radiographic image- image capture only	0-20		No	Must be billed with one of the teledentistry codes (D9995 or D9996)	
D0708	Intraoral-bitewing radiographic image-image capture only.	0-20		No	Must be billed with the teledentistry codes (D9995 or D9996)	
D0709	Intraoral- complete series of radiographic images-image capture only.			Not covered by AHCCCS		
D0999	Unspecified diagnostic procedure, by report	0-20		No	Narrative describing service.	Treatment notes required, narrative of medical necessity and x-ray(s)

AHCCCS covers preventive dental services for members from birth through 20 years of age as specified in the AHCCCS EPSDT Periodicity Schedule and/or when considered medically necessary. The following criteria is based on Health Choice Arizona's interpretation of preventive dental treatment when it considers the treatment necessary based on medical or dental need. Child (0-13 years) and adult (14-20 years) prophylaxis are covered once every 6 months. Fluoride varnish (D1206) is allowed 4 times per year for members 0-20 years of age.

Dental Sealants (D1351) are covered for members 5-14 years of age, when placed on any non-carious and non-restored permanent first and second molar (i.e., 2, 3, 14, 15, 18, 19, 30, and 31). If decay is present, or there is an existing restoration, the sealant is not payable. HCA will not reimburse a provider for replacing a *"lost or missing"* dental sealant within 36 months of initial placement when the replacement is billed by the provider or group who initially placed the sealant. In addition, sealants are reimbursed at a maximum of 2 times per tooth per lifetime.

Space maintainers are covered for members 0-14 years of age when determined to be medically/dentally indicated due to the premature loss of posterior primary molars and when the following conditions exist:

a. There is bone above the erupting permanent tooth.
b. There is adequate space to be maintained.
c. For missing primary first molars, permanent first molars have not erupted.

HCA will allow one space maintainer per lifetime when billed by the provider or group who originally placed the space maintainer. HCA will not reimburse for re- cementation of a fixed space maintainer when placed by the same provider or group. HCA will not reimburse for the removal of a fixed space maintainer (D1556, D1557, D1558) when the appliance is placed by the same provider or group. HCA will not approve a space maintainer for first primary molars when the first permanent molar has erupted. Space maintainers must receive a prior authorization except when billed on the same date of service as an emergency extraction of a primary posterior tooth and when it meets the above-described dental criteria. Treatment notes and radiographs are required with claim submission.

PREVENTIVE						
CODE	DESCRIPTION	AGE LIMITATION	TEETH COVERED	AUTHORIZATION REQUIRED	BENEFIT LIMITATIONS	DOCUMENTATION REQUIRED
D1110	Prophylaxis - adult	14-20		No	One of (D1110, D1120) per 6 Month(s) Per patient. Includes scaling and polishing procedures to remove coronal plaque, calculus and stains.	
D1120	Prophylaxis - child	0-13		No	One of (D1110, D1120) per 6 Month(s) Per patient.	
D1206	Topical application of fluoride varnish	0-20		No	Allowed 4 times per year per patient.	
D1208	Topical application of fluoride - excluding varnish	0-20		No	One of (D1208) per 6 Month(s) Per patient.	
D1320	Tobacco counseling for the control and prevention of oral disease.	0-20		No		
D1321	Counseling for the control and prevention of adverse oral, behavioral, and systemic health effects associated with high-risk substance use.	0-20		No		
D1351	Sealant - per tooth	5-14	Teeth 2, 3, 14, 15, 18, 19, 30, 31	No	One of (D1351, D1352) per 36 Month(s) Per patient per tooth. 2 per lifetime per tooth. Teeth must be caries free. Sealants will not be covered when placed on decayed or restored teeth.	
D1352	Preventive resin restoration is a moderate to high caries risk patient perm tooth conservative rest of an active cavitated lesion in a pit or fissure that doesn't extend into dentin: includes placement of a sealant in radiating non-carious fissure or pits.	5-14	Teeth 2, 3, 14, 15, 18, 19, 30, 31	No	One of (D1351, D1352) per 36 Month(s) Per patient per tooth. 2 per lifetime per tooth. Teeth must be caries free. Sealants will not be covered when placed on decayed or restored teeth.	
D1354	SDF-Interim caries arresting medicament application	0-20	Teeth A-T, 1-32	No	Allowed 4 times per year. Limit of 5 teeth per day. Initial placement, 3 months after, 6 months after and 1 year after initial placement. If tooth is restored or extracted within 6 months of D1354, the dollar amount for D1354 may be recouped.	
D1355	Caries preventive medicament application-per tooth.	0-20	Teeth A-T, 1-32	No	Allowed 4 times per tooth per year. Limit of 5 teeth per day. For primary prevention or remineralization. Medicaments applied do not include topical fluorides.	

PREVENTIVE						
CODE	DESCRIPTION	AGE LIMITATION	TEETH COVERED	AUTHORIZATION REQUIRED	BENEFIT LIMITATIONS	DOCUMENTATION REQUIRED

D1510	Space maintainer-fixed unilateral	0-14	Teeth A, B, I, J, K, L, S, T	Yes	One of (D1510, D1520) per lifetime per patient per tooth when billed by the same provider or group. For posterior primary teeth lost prematurely. Indicate missing tooth numbers and arch quadrant on claim. Payable on seat date only. Re-cementation within 12 months not payable when initial placement is by same provider or group.	Treatment notes, pre-operative x-ray(s)
D1516	Space maintainer - fixed – bilateral maxillary	0-14	Teeth A,B,I,J	Yes	One of (D1516, D1526) per lifetime per patient per arch when billed by the same provider or group. For posterior primary teeth lost prematurely. Payable on seat date only. Re-cementation within 12 months not payable when initial placement is by same provider or group.	Treatment notes, preoperative x-ray(s)
D1517	Space maintainer-fixed-bilateral mandibular	0-14	Teeth K,L,S,T	Yes	One of (D1517, D1527) per lifetime per patient per arch when billed by the same p0rovider or group. For posterior primary teeth lost prematurely. Payable on seat date only. Re-cementation within 12 months is not payable when initial placement is by same provider or group	Treatment notes, preoperative x-ray(s)
D1520	Space maintainer removable-unilateral	0-14	Teeth A, B, I, J, K, L, S, T	Yes	One of (D1510, D1520) per lifetime per patient per tooth. For posterior primary teeth lost prematurely. Payable on seat date only	Treatment notes, preoperative x-ray(s)
D1526	Space maintainer removable-bilateral maxillary	0-14	Teeth A, B, I, J	Yes	One of (D1516, D1526) per lifetime per patient per tooth when billed by the same provider or group. For posterior primary teeth lost prematurely. Payable on seat date only	Treatment notes, pre-operative x-ray(s)
D1527	Space maintainer removable-bilateral mandibular	0-14	Teeth K, L, S,T	Yes	One of (D1527, D1517) per lifetime per patient per tooth when billed by the same provider or group. For posterior primary teeth lost prematurely. Payable on seat date only	Treatment notes, preoperative x-ray(s)

D1551	Re-cement or re-bond bi-lateral space maintainer-maxillary	0-20		No	Not allowed within 12 months of placement when billed by the same provider OR group.	
D1552	Re-cement or re-bond bi-lateral space maintainer-mandibular	0-20		No	Not allowed within 12 months of placement when billed by the same provider OR group.	
D1553	Re-cement or re-bond unilateral space maintainer- per quadrant	0-20		No	Not allowed within 12 months of placement when billed by the same provider OR group.	
D1556	Removal of fixed unilateral space maintainer per quadrant	0-20		No	Only when completed by dentist or practice that DID NOT place appliance	
D1557	Removal of fixed bi-lateral space maintainer-maxillary	0-20		No	Only when completed by dentist or practice that DID NOT place appliance	
D1558	Removal of fixed bi-lateral space maintainer-mandibular	0-20		No	Only when completed by dentist or practice that DID NOT place appliance	
D1575	Distal shoe space maintainer-fixed-unilateral	0-14	Teeth A, B, I, J, K, L, S, T	Yes	One of (D1575) per lifetime per patient per group when billed by the same provider or group. For posterior primary teeth lost prematurely. Indicate missing tooth numbers on claim. Payable on seat date only. Re-cementation within 12 months not payable when initial placement is by same provider or group.	Treatment notes, preoperative x-ray(s)
D1999	Unspecified preventive procedure, by report	0-20		Yes	Narrative describing service.	Treatment notes narrative of medical necessity

AHCCCS covers the restoration of carious permanent and primary teeth with accepted dental materials other than cast or porcelain restorations for members, birth through age 20 when the treatment is considered medically/dentally necessary. Cast or porcelain restorations will be considered when a member is 18 through 20 years of age and has had endodontic treatment and when considered medically/dentally necessary. A functional stainless-steel crown is considered an acceptable permanent restoration. The following criteria are based on HCA interpretation of tooth restorations when it considers the placement medically/dentally necessary and when a tooth would be considered restorable. Routine restorations do not require authorization.

HCA considers amalgam restorations as an accepted dental material for routine restorations. Fees for amalgam and composite restorations include tooth preparations, all adhesives (including amalgam and composite bonding agents), acid etching, cavity liners, bases and curing. Placement of posterior composite resin restorations are allowed but will be reimbursed at the posterior amalgam fees. Reimbursement includes local anesthesia. HCA will not reimburse for the replacement of a “lost” or “defective/poor quality” restoration within 24-months of initial placement when the replacement is billed by the provider or group who originally placed the restoration. Payment is made for restorative services based on the number of surfaces restored, not on the number of restorations per surface per tooth, HCA will reimburse for anterior restorations for primary anterior tooth or teeth

when it is determined to be medically/dentally necessary upon review by the Dental Director. Restoration of deciduous teeth when exfoliation is reasonably imminent will not be routinely reimbursable and is determined by the Dental Director. A child who is 5 years of age or older with a decayed primary anterior tooth or teeth regardless of arch location, may be considered for extraction when pain is present or when the tooth or teeth are severely broken down, structurally, or the tooth may be considered for observation at point of exfoliation as determined by the Dental Director.

The Dental Director must consider the overall dental health of the member. A tooth that is determined to be non-restorable may be subject to an alternative treatment plan. A tooth may be deemed non- restorable by the Dental Director if one or more of the following criteria are present:

i. The tooth presents with greater than a 75% loss of the clinical crown.
ii. The tooth has less than 50% bone support.
iii. The tooth exhibits furcal radiolucent lesions or decay.
iv. The tooth is a primary tooth with exfoliation imminent.
v. The tooth apex is surrounded by severe pathologic destruction of the bone.
vi. The overall dental condition (i.e. periodontal and decay experience) of the patient is such that an alternative treatment plan (LEPAAT) would be better suited to meet the patient's needs.
vii. The inability to access all canals on a multi-canal tooth for endodontic treatment.
viii. The tooth presents with external and/or internal root resorption.
ix. The tooth has a root fracture.
x. Decay extends below the crest of the bone.
xi. Failure of endodontically retreated teeth will be deemed non-restorable.
xii. Loss of interproximal space (from adjacent tooth movement) which affects the ability of restoring a tooth to its proper contours and manageable margins.

RESTORATIVE						
CODE	**DESCRIPTION**	**AGE LIMITATION**	**TEETH COVERED**	**AUTHORIZATION REQUIRED**	**BENEFIT LIMITATIONS**	**DOCUMENTATION REQUIRED**

D2391	Resin-based composite - one surface, posterior	0-20	Teeth 1 - 5, 12 – 16, 17-21, 28 - 32, A, B, I, J, K, L, S, T	No	One of (D2140, D2150, D2160, D2161, D2330, D2331, D2332, D2335, D2390, D2391, D2392, D2393, D2394, D2929, D2930, D2932, D2933, D2934) per 24 Month(s) Per patient per tooth, per surface per provider OR group.	
D2392	Resin-based composite - two surfaces, posterior	0-20	Teeth 1 - 5, 12 – 16, 17-21, 28 - 32, A, B, I, J, K, L, S, T	No	One of (D2140, D2150, D2160, D2161, D2330, D2331, D2332, D2335, D2390, D2391, D2392, D2393, D2394, D2929, D2930, D2932, D2933, D2934) per 24 Month(s) Per patient per tooth, per surface per provider OR group.	
D2393	Resin-based composite - three surfaces, posterior	0-20	Teeth 1 - 5, 12 – 16, 17-21, 28 - 32, A, B, I, J, K, L, S, T	No	One of (D2140, D2150, D2160, D2161, D2330, D2331, D2332, D2335, D2390, D2391, D2392, D2393, D2394, D2929, D2930, D2932, D2933, D2934) per 24 Month(s) Per patient per tooth, per surface per provider OR group.	
D2394	Resin-based composite - four or more surfaces, posterior	0-20	Teeth 1 - 5, 12 – 16, 17-21, 28 - 32, A, B, I, J, K, L, S, T	No	One of (D2140, D2150, D2160, D2161, D2330, D2331, D2332, D2335, D2390, D2391, D2392, D2393, D2394, D2929, D2930, D2932, D2933, D2934) per 24 Month(s) Per patient per tooth, per surface per provider OR group.	

AHCCCS covers the placement of stainless steel crowns on posterior primary and permanent teeth when medically/ dentally necessary. The following criteria are based on HCA interpretation of the placement of stainless steel crowns when it considers the placement medically/ dentally necessary. Endodontic therapy does not always necessitate the placement of a SSC or a SSC done not always necessitate the need for endodontic therapy. HCA will not reimburse a provider or group for the replacement of a "lost" or damaged crown within 36 months of initial placement when the replacement is billed by the provider or practice who originally placed the crown. HCA will not reimburse for an improper fitted SSC placed by the same provider or group, which has contributed to ectopic eruption of permanent molars. It is the responsibility of the provider or group to replace the SSC at no cost to HCA or the member. Permanent molars must have pathologic destruction to the tooth by caries or trauma and should involve four or more surfaces and two or more cusps, or hyperplastic teeth following endodontic therapy (RCT), teeth with hereditary anomalies. Permanent bicuspids must have pathologic destruction to the tooth by caries or trauma and should involve three or more surfaces and at least one cusp.

Prefabricated resin crowns, prefabricated stainless steel crowns with resin window and prefabricated esthetic coated stainless steel crowns are a benefit only for anterior primary teeth. HCA will allow for the least expensive professionally acceptable alternative treatment as determined by dental review. HCA covers the placement of cast crowns on permanent teeth for members 18-20 years of age when teeth have been successfully treated endodontically, and when treatment is necessary based on medical or dental need. The following criteria is based on HCA interpretation of the placement of cast crowns when it considers the placement medically/dentally necessary. Prior- authorization is required for all cast crowns. Requests may be denied if the endodontic treatment is inadequate. Prior authorization requests for multiple cast crown restorations may be subject to alternative treatment when the overall dental condition of the patient is such that an alternative treatment plan would be better suited to meet the patient's needs.

A crown will not be approved if adequate tooth structure does not remain to establish cleanable margins, poor crown to root ratio, or the tooth appears to retain insufficient amounts of natural tooth structure. Cast dowel cores are not allowed. A functional SSC is considered an acceptable permanent restoration.

Cast crowns following endodontic therapy or when treatment is necessary based on medical or dental need, must meet all of the following criteria:

a. Request must include a dated and labeled post-endodontic PA x-ray, if appropriate. A crown must be opposed by a tooth or full denture in the opposing arch, or be an abutment for an approved partial denture.
b. The patient must be free from active and advanced periodontal disease.
c. The periapical and furcal tissue must be free of pathology.
d. The tooth exhibits pathology by decay or fracture requiring treatment (i.e., a tooth that has been endodontically treated, which has been restored with a stainless steel crown that is considered functional, will not necessarily be approved for a cast crown).

e. A diagnostic quality post cementation radiographs (i.e. bitewing and PA) must be submitted with the claim to be considered for payment.
f. Crown margins must be closed and apical in position to the build-up.
g. Proximal contacts when present, must be reestablished.
h. Opposing occlusion must be reestablished.
i. There can be no decay present.

Cast crowns following endodontic therapy are payable when arch integrity exists, and opposing teeth are present and in good dental health. Arch integrity exists when all anterior teeth are present (a fixed or removable appliance replacing one or more anterior teeth is acceptable) and all first and second bicuspids and first molars are present and free of overt periodontal disease and do not require endodontic treatment (a removable or fixed appliance replacing one or more of these teeth is acceptable).
Second and third molars may or may not be present. The fee for crowns includes the temporary crown that is placed on the prepared tooth and worn while the permanent crown is being fabricated for permanent teeth. HCA reimburses permanent crowns on the seat date. Member must be eligible on the cementation date in order for crown to be paid. A post-cementation bitewing and periapical x-ray must be submitted with the claim. X-rays taken for post- cementation cannot be billed to HCA. Cast crowns are only payable once per 5 years per tooth. Reimbursement for a cast crown on the third molar will be considered only if it is functioning as a second molar. Prior authorization requests for multiple cast crown restorations may be subject to alternative treatment when the overall dental condition of the patient is such that an alternative treatment plan (LEPAAT) would be better suited to meet the patient's needs.

The build-up is included in the cost of the SSC, composite, plastic, acrylic, or cast crowns. Under extreme tooth structure loss conditions, build-ups on permanent teeth after endodontic treatment may be approved by the Dental Director. Build-ups are not considered a "stand-alone" restoration and will not be approved as such.

Prior Authorization requests with "Approved Payment Pending X-rays" require appropriate post-operative x-rays for reimbursement consideration.

D2999	Unspecified restorative procedure, by report	0-20	Teeth 1 - 32	No		

AHCCCS covers pulp therapy for permanent and primary teeth, except third molars unless it is functioning in place of a missing second molar, for members ages 0 – 20 years of age when it is considered medically necessary. The following criteria is HCA interpretation of pulp therapy and root canal therapy when it considers the pulp therapy or root canal treatment to be medically/dentally necessary. A complete treatment plan (to include services that do not require prior authorization) with narrative and documentation demonstrating medical/dental necessity may be necessary for complex dental care for members ages 16 and older. All radiographs taken during the course of root canal therapy and all post-treatment radiographs are included in the fee for the root canal procedures. Provision of root canal therapy is not considered appropriate when the prognosis of the tooth is questionable. Prior authorization requests for root canal treatment on multiple teeth may be subject to alternative treatment when the overall dental condition of the patient is such that an alternative treatment plan would be better suited to meet the patient's needs.

HCA does not reimburse for a pulpectomy on a primary tooth. HCA will approve an alternative treatment of D3220 when requested. HCA does not generally reimburse for pulpal debridement. Once the pulp has been extirpated(removed), RCT is considered to have been started and should be billed as such (per ADA guidelines).
Consideration for payment may be made if this is a stand- alone emergency procedure for the relief of acute pain when member will be subsequently referred to an endodontist. A narrative indicating endodontic referral must accompany the claim in order for it to be considered.
Providers are responsible for any follow-up treatment, including retreatment required by a failed endodontically treated tooth within 12 months post completion.
Retreatment of endodontically treated teeth is to be completed by an endodontist. Endodontic therapy is payable only when arch integrity exists and opposing teeth are present and in good dental health. Arch integrity exists when all anterior teeth are present (a fixed or removable appliance replacing one or more anterior teeth is acceptable) and all first and second bicuspids and first molars are present and free of overt periodontal disease and do not require endodontic treatment (a removable or fixed appliance replacing one or more of these teeth is acceptable). Second and third molars may or may not be present.

Retreatment will be considered when periapical pathology persists or enlarges, or when a poorly filled endodontically treated tooth or teeth present with symptoms consistent with treatment failure.

Retreatment will not be allowed on an asymptomatic non pathologic poorly filled tooth or teeth.
A tooth or teeth that exhibit both periapical and furcal involvement, will be deemed non-restorable. A treated tooth or teeth, that exhibit external or internal resorption with either periapical or furcal pathology will be deemed non-restorable. Failure of an endodontically retreated tooth or teeth, will be deemed non-restorable.

Root canal therapy must meet the following criteria:

- Fills should be to within 2 mm of the radiological apex to ensure an apical seal is achieved
- Fills must be properly condensed/obturated
- Filling material does not extend excessively beyond the apex.

Authorization/payment for root canal therapy will not meet criteria if:

- Gross periapical or periodontal pathosis is demonstrated radiographically (caries at crestal or sub-crestal bone or to the furcation, deeming the tooth non-restorable)
- The general oral condition does not justify root canal therapy due to loss of arch integrity
- Root canal therapy is not covered for third molars unless they are in abutment for the partial denture or functioning in place of a missing molar
- Tooth or teeth do not demonstrate 50% bone support in which case the tooth meets the definition of a non-restorable tooth
- Root canal therapy is in anticipation of placement of an overdenture
- A filling material not accepted by the Federal Food and Drug Administration (e.g. Sargenti filling material) is used
- LEPAAT

Apexification/Apexogenesis (D3351, D3352, and D3353) may be considered in cases when RCT therapy is indicated on permanent teeth with incompletely formed apices. The type of procedure(s) used to induce root end closure will be dictated by the clinical and radiographic presentation of pulpal tissue. If the pulp is vital, then the covered procedures will include a partial pulpotomy. If the pulp is

non-vital, then the covered procedure will be apexification.

Up to three visits may be allowed for apexification. However, if root end closure is accomplished at the initial or the intermediate visit, then additional apexification visits will not be allowed. The published fee for D3352 is the maximum reimbursable amount regardless of the number of visits. HCA may down code apexification/apexogenesis to the cost of the partial pulpotomy when medically/dentally indicated.

Apicoectomy (D3410, D3421, D3426) may be considered in cases where persistent periapical pathology remains or symptoms consistent with root canal failure occurs in an otherwise well treated tooth. Apicoectomy will not be allowed on asymptomatic non pathologic poorly filled teeth. A tooth or teeth that exhibit both periapical and furcation involvement will be deemed non-restorable. A treated tooth or teeth that exhibit internal resorption with either periapical or furcal pathology, will also be deemed non-restorable. Failures of endodontically retreated teeth will be deemed non-restorable and an apicoectomy will not be approved.

Documentation needed for authorization/payment and specialty referrals for pulp therapy and/or root canal therapy: Diagnostic quality pre-operative periapical and bitewing radiographs of the tooth or teeth, and a full mouth series or panoramic x-ray that clearly shows the overall condition of the member's oral health. A dated and labeled post-operative radiograph must be submitted for review for payment.

Treatment rendered under emergency conditions, when authorization is not possible, will require appropriate radiographs clearly showing the adjacent and opposing teeth, date pre and post-operative x-ray, bitewing x-ray, and a periapical x-ray of the tooth or teeth treated with the claim for retrospective review for payment. In cases where pathology is not apparent, a written narrative justifying treatment is required. In cases where the root canal filling does not meet HCA's treatment standard, HCA can require the procedure to be redone at no additional cost to the member. In the event that an endodontic referral is necessary, any reimbursement already made for an inadequate service may be recouped after HCA reviews the circumstances.

D3472	Surgical repair of root resorption-premolar	0-20	Teeth 4, 5, 12, 13, 20, 21, 28, 29	**Yes Effective date 3/1/2021**	Does not include placement of restoration.	
D3473	Surgical repair of root resorption-molar	0-20	Teeth 2-15, 18-31 reimbursement for a third molar will be considered only if it is functioning as a second molar.	**Yes Effective date 3/1/2021**	Does not include placement of restoration.	
D3501	Surgical exposure of root surface without apicoectomy or repair of root resorption-anterior	0-20	Teeth 6-11, 22-27	**Yes Effective date 3/1/2021**	Not to be used in conjunction with apicoectomy or repair of root resorption.	

D3502	Surgical exposure of root surface without apicoectomy or repair of root resorption-premolar	0-20	Teeth 4, 5, 12, 13, 20, 21, 28, 29	**Yes Effective date 03/01/2021**	Not to be used in conjunction with apicoectomy or repair of root resorption.	
D3503	Surgical exposure of root surface without apicoectomy or repair of root resorption-molar	0-20	Teeth 2-15, 18-31 reimbursement for a third molar will be considered only if it is functioning as a second molar	**Yes Effective date 03/01/2021**	Not to be used in conjunction with apicoectomy or repair of root resorption.	
D3920	Hemisection (including root removal), not including root canal therapy	0-20	Teeth 2-15, 18-31 reimbursement for a third molar will be considered only if it is functioning as a second molar.	No	Pre-operative radiographs of adjacent and opposing teeth. 1 per lifetime	
D3999	Unspecified endodontic procedure, by report	0-20	Teeth 2-15, 18-31 reimbursement for a third molar will be considered only if it is functioning as a second molar. A - T	No	Pre-operative radiographs of adjacent and opposing teeth. 1 per lifetime	

Reimbursement includes local anesthetic. Full mouth debridement (D4355) is justified when the comprehensive oral evaluation (D0150) or comprehensive periodontal evaluation (D0180) cannot be performed due to excessive sub and/or supracalculus, heavy plaque, and debris buildup. Full mouth debridement criteria includes periodontal charting indicating abnormal pockets in multiple sites and radiographic evidence of heavy sub and or supra calculous. This preliminary procedure does not preclude the need for additional procedures. A full mouth debridement does not take the place of a regular cleaning when heavy calculus is present.

Justification for scaling and root planning (SC/RP) include, but are not limited to the following:

i. Radiographic evidence of moderate to heavy subcalculus
ii. Periodontal pocketing of at least 5mm with bleeding upon probing.
iii. Radiographic bone loss (horizontal or vertical)
iv. Clinical attachment loss (CAL) of at least 2mm
xiii. Documented (intraoral photographs preferred) gingival inflammation into the adjacent attachment apparatus.
xiv. Gingival recession (i.e. high frenum attachment)

Referral or treatment for periodontal evaluation must include radiographic, intraoral photos of the area of concern in addition to periodontal charting.

Claims for preventive dental procedure codes D1110, D1120, D1206, D1208, D1351, and D1352 will be denied when submitted for the same date of service as any D4000 series periodontal procedure codes.

D4910	Periodontal maintenance procedures	0-20		No	One of (D4910) 3 months after D4341 or D4342 and one (D4910) six months after D4341or D4332. After the first six months, one (D4910) and one (D1110) will be allowed at 6 month intervals each calendar year thereafter.	
D4920	Unscheduled dressing change (by someone other than treating dentist or their staff)	0-20		No		
D4999	Unspecified periodontal procedure, by report	0-20		Yes		Treatment notes, preoperative full mouth series of x-rays, complete periodontal charting.

HCA allows for coverage of full and partial dentures for members ages 6-20 years of age, when they are considered medically necessary or as an alternative treatment choice. The following is based on HCA interpretation of these services when considered as necessary based on medical and/or dental need.

All full and partial dentures include six months of post-delivery care. Full and/or partial dentures replacement will be considered only when existing full or partial dentures are not serviceable or cannot be relined or rebased.

Reimbursement for all removable partial dentures includes a minimum of two clasps. The total number of clasps is dictated by the retentive requirements of each case, with no additional payment for necessary supplemental clasps.

If a member's health would be adversely affected by the absence of a prosthetic replacement, and the member could successfully wear a prosthetic replacement, such a replacement will be considered. In the event that the member has a record of not successfully wearing prosthetic replacements in the past, or has gone an extended period of time (three years or longer) without wearing a prosthetic replacement, the prognosis is poor. Mitigating factors surrounding these circumstances should be included with the prior approval request.

Eight natural or prosthetic teeth in occlusion (four maxillary and four mandibular teeth in functional contact with each other) are generally considered adequate for functional purposes. One missing maxillary anterior tooth or two missing mandibular anterior teeth may be considered a problem that warrants a prosthetic replacement.

Full or partial dentures will not routinely be replaced when they become unserviceable or are lost within 36 months, except when they become unserviceable through extensive physiological change. If the member can provide documentation that reasonable care has been exercised in the maintenance of the prosthetic appliance, and it did not become unserviceable or lost through negligence, a replacement may be considered. Prior approval requests for such replacements will not be reviewed without supporting documentation. A verbal statement by the member that is then included by the provider on the prior approval request would generally not be considered sufficient.

The relining of a full and/or partial denture will be considered when the prosthetic appliance is deemed unserviceable. The relining of immediate full and partial dentures will be considered within 3-6 months post-delivery. Relining of full and partial dentures will be considered once in a 2–5year period following the delivery date.

Reimbursement of removable full and/or partial dentures will be authorized on delivery date only.

AHCCCS covers extraction of symptomatic, infected, and non-restorable primary and permanent teeth, and other surgical procedures when medically necessary for members up to age 20. The following criteria are based on HCA interpretation of dental extractions when it considers the extraction to be medically/dentally necessary. The removal of primary teeth whose exfoliation is imminent does not meet criteria. Extractions are covered only if the tooth is symptomatic and/or exhibits pathology.

HCA carefully evaluates and individually assesses each third molar estimating the balance between risk, benefit, and cost. The definition of impaction is a tooth that fails to erupt into the dental arch within the usual range of expected time. Complete eruption of third molars occurs between 20 and 23 years of age but eruption may continue until age 25. Normally developing third molars should be permitted to erupt.

HCA must see the presence of a disease state, a pathological process, a specific impediment to a normal eruption pattern, or a constant chronic or recurring acute pain. Transient (occasional) pain/discomfort is common and not a justifiable reason for extraction.

Pain must be associated with a localized identifiable causative factor to be a covered benefit. HCA must see a localized pathologic process such as recurring infection, multiple episodes of purulent exudate, adjacent tooth resorption, cyst, or tumor formation.

The prophylactic removal of asymptomatic teeth or teeth exhibiting no overt clinical pathology is an elected surgery and not a covered benefit. HCA will cover palliative therapy for conditions associated with non-impacted teeth (i.e. treatment of pericoronitis in partially erupted third molars) If treatment fails or the pericoronitis recurs subsequent extractions will be considered. Treatment notes documenting attempted palliative therapy (i.e. curettage, antimicrobial sub-irrigation, and/or antibiotic treatment) must be submitted with a referral request.

Extracting third molars early when individuals are in their teenage or early adult years simply leads to a more invasive surgical procedure increasing the likelihood of complications. It also prematurely commits the member to extractions where the third molars may not cause any problems and erupt normally in the future.

Following the decision not to extract third molars the teeth should be clinically re-evaluated with periodic radiographic examination.

The prophylactic removal of asymptomatic teeth (i.e. third molars) or teeth exhibiting no overt clinical pathology is an elective surgery and is not a covered benefit. HCA WILL COVER palliative therapy for conditions associated with non-impacted wisdom teeth (i.e. treatment of pericoronitis in partially erupted third molars with adequate space for eruption). If treatment fails or the pericoronitis recurs, subsequent extractions will be considered. Treatment notes documenting attempted palliative therapy (i.e. curettage, antimicrobial sub-irrigation, and/or antibiotic treatment) must be submitted with a referral request. Suture removal, treatment of dry socket, and removal of bone fragments are considered part of the extraction treatment when performed by the same dentist or group of dentists who removed the tooth. Palliative treatment would be considered for reimbursement when a dentist other than the original treating dentist or group provides these services.
The removal or exposure of teeth for orthodontic related reasons is not a covered benefit.

Frenectomy/frenuloplasty requires prior authorization. Frenectomy/frenuloplasty for the treatment of oral structural anomalies is considered medically necessary when all of the following criteria are met:

a. The member has undergone a medical pediatric evaluation
b. Functional limitations resulting in inadequate feeding or swallowing
c. Limited tongue mobility resulting in speech disorders, following completion of evaluation and therapy by a qualified speech pathologist

Treatment rendered under emergency conditions will require submission of the pretreatment x-ray(s) and treatment notes showing diagnosis and procedure with claim for pre-payment review unless approved on a prior authorization request.

Referrals or treatment of TMJ is not covered EXCEPT for the reduction of trauma.

ORAL SURGERY

HCA covers orthodontics/orthognathic surgery when medically necessary for members ages 18 and younger when determined to be the primary treatment of choice or an essential part of an overall treatment plan designed by the PCP in consultation with the dentist. HCA coverage of orthodontic treatment including interceptive orthodontic treatment is limited to children with facial skeletal deformities that resulted in significant malocclusion (i.e.Cleft Palate). In rare instances, children exhibiting a severe malocclusion that is such that normal mastication or function is impossible, or lack of such treatment would impact a member's health/nutritional needs may be approved at the dental director's discretion. Documentation from the child's PCP indicating BMI falling in the underweight range is necessary. All ortho treatment must be completed by age 21 to guarantee reimbursement. The following guideline is based on HCA interpretation of orthodontic and orthognathic surgery when it considers the services medically/dentally necessary. All orthodontic/ orthognathic services must be prior authorized. Extractions and other surgical procedures (i.e. surgical exposure of an unerupted tooth or procedures to facilitate the eruption of impacted teeth) are not payable by HCA unless included in an approved orthodontic/orthognathic surgery case.

a. Orthodontic/orthognathic surgery for the treatment of facial skeletal deformities that result in significant malocclusion is considered medically necessary if the medical appropriateness criteria are met.

b. Orthodontic/orthognathic surgery for the treatment for obstructive sleep apnea (OSA) is considered medically necessary if the medical appropriateness criteria are met.

c. Orthodontic/orthognathic surgery for the improvement of an individual's facial structure in the presence of a functional malocclusion in the absence of significant malocclusion is considered cosmetic.

d. Orthodontic/orthognathic surgery for the treatment of temporomandibular joint (TMJ) disorder is considered investigational.

Local anesthesia is considered part of the treatment procedure and no additional payment will be made for it. HCA covers GA for specific medical or behavioral conditions. GA may be necessary for very complex or lengthy procedures. The majority of third molars can be extracted without general anesthesia. AHCCCS covers nitrous oxide, oral conscious sedation, intravenous conscious sedation, or general anesthesia when local anesthesia is contraindicated, or the medical/behavioral management of the patient requires it for members 0-20 years of age. Nitrous oxide requires prior authorization for members 11-20 years of age.

Occlusal guard for Bruxism- Intraoral photos and detailed narrative of symptoms are necessary to consider dental needs.

D9999	Unspecified adjunctive procedure, by report	0-20		BR	Narrative describing service.	

Professionally Accepted Treatment or Alternative Services

Dental providers are required to consider the most cost-effective means by which to replace lost dental functions for qualified members with complex dental disease. HCA will allow the least expensive professionally acceptable alternative treatment (LEPAAT) when determined by professional review. Applying the LEPAAT standard is not to be considered as a dictation of treatment, but to notify the treating dentist of the services that Health Choice Arizona will pay for. Complex dental care is defined as the treatment of three or more teeth with root canals, build-ups, and /or cast crowns in a six month period for dental conditions not related to traumatic injuries. In certain member/ patient situations, extensive dental restorative treatment may not be warranted and alternative benefits to the requested procedures may be applied. In this instance, Health Choice Arizona requires the submission of a complete treatment plan with the appropriate diagnostic radiographs.

Those situations include, but not limited to:

i. Substance abuse.
ii. Rampant caries.
iii. Gross or extensive caries.
iv. Missing teeth.
v. Unrestorable teeth.
vi. Periodontal disease(s) i.e., gingivitis, periodontitis, etc.
vii. Inadequate home care.
viii. Lack of arch integrity.
ix. Poor dental history.
x. Poor prognosis.
xi. Mental /behavioral disorders.
xii. Eating disorders. i.e., Anorexia nervosa, Bulimia nervosa.

Under these situations, Health Choice Arizona may not approve multiple root canal treatment and subsequent build-ups and crowns. HCA may consider allowing the extractions of the teeth and placing removable prosthetics when medical necessity can be stabilized, and HCA guidelines and criteria are met. Complex dental cases may only be approved when medically necessary can be established and when there is documentation for high probability for success.
